

Eurocage

Mesh Security Cages

Eurocage is a comprehensive range of multi-purpose mesh storage cages, complete with mesh roofs, for indoor or outdoor use. Eurocage is suitable for most applications where security is required to combat theft or protect equipment.

The system is quick and easy to construct and has a comprehensive range of single, double and sliding doors, which can be fitted with most types of locks and latches, including interlocks.

Eurocage is bolted to the floor (from the inside, maintaining security) which means it has the added benefit of being de-mountable and relocated with a minimum of effort. Standard cages are designed around our 1220mm wide panel, however standards configurations do not always fit into the required dimensions. Therefore the non-standard or bespoke design is always an option.

Eurocage is available in 2, 3 & 4 sided cages as well as specified angles.

- Robust & durable
